

DIRECT RESPONSE

# No more SIM switching with Multi SIM

If you have a mobile phone fitted into your car and a separate mobile handset for every day use, but get frustrated with the need to swap the SIM card, then Direct Response may just have the perfect solution for you. Enjoy more mobile flexibility with Vodafone Multi SIM, which allows you to make and receive calls on the same number from multiple handsets without switching your SIM card from handset to handset.

## How does it work?

Your main number or published number is the number that people can contact you on. Each additional SIM (Up to 10 mobile devices) is allocated a routing number, of which you assign an ID number. Once the ID numbers for each of the additional SIMs are provided by Alternative Networks, you will be able to program calls to route to the particular SIM of your choice.

If you forget which ID number you have assigned to which SIM card, then you can simply key in the short code \*#130# send.

After a short time the ID number for that SIM will be displayed on the screen.

## How do I nominate the device?

Whenever someone calls your published number the call is routed to the SIM you have nominated.

To nominate the SIM you are currently using, key in the short code \*131# send. Within a few seconds a message will confirm that you have selected that particular SIM to receive in coming calls.

Alternatively you can nominate a SIM remotely by keying in the short code \*131\*ID no# send (E.g. \*131\*2# send to nominate SIM 2)

After a few seconds a message will be displayed confirming the SIM ID you have nominated.

## Other Commands

- What SIM ID am I?      \*#130# send
- Who is nominated?    \*#131# send
- Nominate me            \*131# send
- Nominate other        \*131\* ID no. # send

All network services such as Vodafone mail, voice mail, text messaging and call forwarding can be accessed in the normal way so you will lose no functionality by activating the Vodafone Multi SIM. For further information on this service please contact Direct Responses Customer Services team or your Account Manager.

(Please note GPRS cannot be used in conjunction with Multi SIM)

**The Benefits**

**Save time**

- No need to swap your SIM card between different mobile phones or from one device to another. Simply nominate which SIM you'd like the call routed to.

**Reduce Costs**

- Each extra SIM you activate has a preferential line rental lower than your standard monthly charge
- Single bill for multiple SIM cards, since all calls will be charged against your published number, helping you manage your costs more effectively.

**Improve communication**

- Single published number, so people will no longer have to guess which number to contact you on. Same published CLI (caller line identity), or mobile number will be displayed for all devices, so the person you call will know it's you.
- However, you can choose to withhold it, giving you complete control and flexibility over your mobile communications.
- Make simultaneous calls from different SIM cards. You can dial into your LAN to download e-mails onto your laptop while somebody is speaking to you on your mobile phone, without having to hang up.
