

The revolutionary Xda IIs all-in-one handheld

Take full advantage of the Internet to keep in touch and informed with the revolutionary Xda IIs, powered by O₂ Mobile Web. With the Xda IIs and Mobile Web you can enjoy full internet access and email on the move, important for all business users who need to be contactable, in and out of the office.

What is the XDA IIs?

This powerful pocket PC, personal organiser, camera and GPRS enabled all-in-one allows you to access websites, make and receive calls, take and send still and video images and send and receive email wherever you are*. Everything you need to access the Internet is already in place. No wires or add-ons are required and there's no need to change your email address. It's so easy to use. Just slot in your SIM card. With the GPRS service you only pay for the data you use with your Xda IIs, not how long it takes you to use it. Once you've received an email or attachment you can take as long as you like to read it and put together a reply.

XDA IIs features

Email on the go

With Mobile Web you can send and receive internet-based emails to:

- Keep in touch.
- Exchange documents with customers and colleagues.
- Be responsive to customers whenever you're needed.
- Keep on top of your messages so you don't miss an opportunity.

Make calls

You can use your Xda IIs as a mobile phone, in the US or Europe:

- Answer important calls even if you're in the middle of surfing or composing an email.
- Send and receive text messages and use the Xda IIs' stylus and touch sensitive screen or Qwerty slide-out keyboard to compile a text in no time.
- Use Voicemail 901 if you're too busy to take a call or already talking with someone.
- It's quad band, so you can use it in both North America and Europe.

Pocket PC

With its touch sensitive 64 colour LCD screen and Windows Mobile 2003 applications (Word, Excel, Powerpoint, Outlook and Explorer) the Xda IIs gives desktop computing power on the move:

- Create, check and revise documents, forwarding them to customers or colleagues and download them to your PC when you're back at the office.
- View your current appointments, enter new ones and update your address book and back it up to your desktop PC so you can always keep on top of your appointments.
- Upload your contacts to your Xda IIs from your SIM or PC contact list.
- Keep up to speed and check customer websites on your way to the meeting or your own company site for stock availability and pricing.

Bluetooth™

Connect to other Bluetooth™ devices such as printers, headsets or even synchronise Pocket Outlook with your laptop.

Integrated camera

Allows you to send/receive pictures and video, giving a total communication experience.

Other features

- The Xda IIs has an integrated slide-out QWERTY keyboard so it is even easier to use
- It has WLAN built in, so there's no need to get a separate WLAN card.
- The Active user interface is unique to O₂ and makes the device easy and intuitive to use with fast access to all key features.

The Benefits

• Save time

The Xda IIs allows you to access the internet in full colour, on the move with the click of a button, no need for add-on kit or modem set up. The Xda II comes pre configured for internet access.

• Save space

There is no need to carry a mobile handset and a PDA around. Combining a Personal Digital Assistant (PDA) with a mobile phone in a single unit, the Xda IIs lightens the load, giving you a host of functionality.

• Keep in contact

Manage your inbox on the move. The Xda IIs allows you to send and receive web-based email wherever you are, subject to network coverage. Either use your personal Internet based address or pick up your work (POP3 and IMAP4) emails. You are able to send emails directly from the contact list in your Xda IIs. Using Microsoft Active Sync you can ensure that your contact list is updated every time you return to the office.

*Subject to network coverage
